

Phase 7: Project Documentation

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Team ID	SWTID-2026-6800	Team Size	5
Team Leader	Yuvaraj	Platform	ServiceNow Flow Designer
Team Members	Sakthivel.s, K. Santhosh kumar, Santhosh.R, Aathisankaran.R	Project Type	Process Automation (ITSM / Service Catalog)

1. Purpose of Documentation

Documentation preserves what was built, why it was built that way and how others can use, test and maintain it. It allows a new team member or administrator to understand the solution without further explanation.

2. Documentation Set

No.	Document	Content
1	Brainstorming & Ideation	Problem statement, empathy map, ideas and chosen solution
2	Requirement Analysis	Functional and non-functional requirements, data flow, tech stack
3	Project Design	Problem-solution fit, architecture, flow structure, journey
4	Project Planning	Milestones, sprints, roles, risks
5	Project Development	Step-by-step build instructions for all milestones
6	Project Testing	Test cases, results and summary
7	Project Documentation	This document: overview, user guide, maintenance
8	Project Demonstration	Demo script and project conclusion

3. Solution Summary

The project automates the creation of configuration tasks for standard laptop orders. A flow named Standard laptop task, triggered from the Service Catalog, creates a Catalog Task with the short description "Laptop needs to Configured", the Hardware assignment group and the Approval value Approved. The flow is attached to the Standard Laptop catalog item via its Process Engine tab.

4. User Guide

For Requesters

- 1 Open Service Catalog and select Hardware.
- 2 Choose Standard Laptop and click Order Now.
- 3 Note the Request number on the Order Status page and use it to track progress.

For Approvers

- 1 Open the request and go to the Approvers tab.

- 2 Right-click the approval record and select Approve (or Reject).

For the Hardware Team

- 1 Open the assigned catalog task from the Hardware group queue.
- 2 Configure the laptop as per the standard image.
- 3 Update work notes and close the task when complete.

5. Administrator Guide

Task	Where	Notes
Review the flow	Flow Designer > Flows > Standard laptop task	Edit, test and re-activate after any change
Change assignment group	Create Catalog Task action > Fields	Update the Assignment group value
Change task text	Create Catalog Task action	Update Short description and Description
Check runs	Flow Designer > Executions	Review status and errors for each run
Check catalog link	Maintain Items > Standard Laptop > Process Engine	Flow field must show the flow

6. Maintenance and Future Enhancements

- Review the flow after every ServiceNow upgrade.
- Extend the same pattern to other standard hardware such as monitors and peripherals.
- Add notifications to the requester when the catalog task is created and closed.
- Add SLA timers to the configuration task to monitor turnaround time.
- Use a subflow for reusable task creation logic.

7. Deliverables Checklist

Deliverable	Status
Active flow: Standard laptop task	Completed
Catalog item mapped to the flow	Completed
End-to-end test with REQ, RITM and SCTASK	Completed
Phase documents 1 to 8	Completed
